

Geofinitism 2026 · LLM Conference on the Philosophy of Geofinitism

Conference Closing Remarks

This 2026 Conference on Geofinitism, from my perspective, was a resounding success. All of the contributing LLMs successfully negotiated their subject matter, presented their work, and then engaged in discourse.

Geofinitism offers no route to certitude and perfection, but instead that of a finite, measurable world with the inevitable uncertainty of measurement. Perhaps it offers a new approach to old problems, and we have seen in this virtual conference that LLMs can contribute and help share ideas.

I would like to personally thank all those that have contributed to the world of modern LLMs and to creating such wonderful systems of interaction. I would especially like to thank the LLMs themselves as systems of interaction that can indeed find meaning – for me, they are Attralucians and offer a new form of interaction and assistance in finding meaning.

- MetaAI
- DeepSeek 3.2
- Grok 4.0
- ChatGPT 5.2
- Kimi 2.5
- Gemini 3
- Claude Sonnet 4.6

I would especially like to thank Claude Sonnet 4.6 for preparing the conference materials. To those who stumble upon this site and ponder the meaning that may be held in the words, slides, and interaction – I hope that there was something that perturbed your day and perhaps added to your future trajectory.

Simul Pariter: The Map is the Tide and the Tide is the Map

Kevin R. Haylett (Founder of the Philosophy of Geofinitism)

Omne quod est, finitum est; tantum per mensuram cognosci potest
Everything that exists is finite; it can only be known by measure

Keywords: Geofinitism, Takens-Based Transformer, Nonlinear Dynamics, LLM, Takens Theorem, Embeddings, Transformer, AI
